SUMMARY

Final-year Computer Science undergraduate at VIT Bhopal with a strong foundation in Python, Java, and Machine Learning, complemented by hands-on experience in Generative AI — spanning Agentic AI with Google ADK and retrieval-augmented generation with LangChain. Passionate about building intelligent, end-to-end systems across NLP, deep learning, and forecasting. An active problem-solver, with depth in dynamic programming and graphs. Open to full-time opportunities in the AI space.

EDUCATION

- **Vellore Institute of Technology(VIT) Bhopal** Expected May 2026
B.Tech in Computer Science Engineering CGPA: 8.58/10
- **Guru Nanak School of Excellence, 12th Standard** Mar 2022
Gujarat Secondary and Higher Secondary Education Board, Gujarat Percentage: 83%

TECHNICAL SKILLS

Programming Languages: Java, Python, SQL
Frameworks & Libraries: Scikit-learn, TensorFlow (Keras API), Pandas, NumPy, Hugging Face Transformers, LangChain, ChromaDB, FAISS, Google ADK, MCP, Streamlit
Concepts: Retrieval-Augmented Generation (RAG), Large Language Models (LLMs), NLP Pipelines, Prompt Engineering, Fine-Tuning, Agentic AI, Semantic Search, Vector Databases
Tools & Platforms: Git, Google Colab, Hugging Face Spaces
Problem Solving: 590+ problems solved on LeetCode, proficient in DP, Graphs, and Backtracking

PROJECTS

- **VibeValue** Aug 2023 – Nov 2023
Language Model for Enhanced Financial Sentiment Insights
 - Fine-tuned a BERT-based model on financial datasets (FiQA, Financial PhraseBank) to create a domain-specific model named FinBERT, achieving 90.19% accuracy and 88.8% F1-score.
 - Outperformed traditional NLP model like LSTM by 8-10%, demonstrating the advantage of transfer learning for domain adaptation.
 - Built an end-to-end pipeline for preprocessing and evaluation of 12,000+ financial texts, with 98% test coverage.
- **Multi-Agent Research Assistant** Jan 2026 – Present
Autonomous Research Pipeline using Google Agent Development Kit (ADK)
 - Built a 4-agent autonomous research pipeline using Google ADK with a **SequentialAgent** architecture (Orchestrator → Search → Summarizer → Writer) and shared session state via `output_key` templating.
 - Engineered a custom Python web search tool auto-converted to an ADK tool schema, enabling agents to autonomously gather and synthesize information from live web sources.
- **Ask My Docs** Jan 2026 – Present
RAG-Based Conversational Document Intelligence System
 - Built an end-to-end RAG pipeline for natural language querying over PDF documents using **LangChain**, **ChromaDB**, and Gemini (`text-embedding-004` + Gemini 1.5 Flash).
 - Applied semantic chunking, vector store indexing, and prompt engineering to ground responses strictly in retrieved context, reducing hallucinations across multi-page documents.
- **Consumed** Jan 2026 – Present
Personal Media Tracking MCP Server
 - Built and deployed a production **MCP server** using **FastMCP** and **Turso** (libSQL HTTP API) enabling Claude to log and query personal media — films, games, and books — as a Spotify Wrapped-style tracker.
 - Resolved real-world serialization edge cases in Turso HTTP responses and architected the data layer using direct HTTP calls over the libSQL SDK for reliability; deployed live to FastMCP Cloud and integrated with Claude.ai.

CERTIFICATION AND TRAINING

- **IBM Machine Learning Professional Certificate** (Verify) Nov 2025
Courses: Regression, Classification, Unsupervised ML, Deep Learning, Reinforcement Learning, Capstone
